

## About Dr. Nupponen

### Our office is a 100% cash practice.

We ask for payment from the patient up front, but we do submit their insurance for them. We do everything we can to help them get paid by their insurance, but we make every effort to educate them about what is the best choice for them. 75%+ of our patients have dental insurance. We are straight forward with our patients, backing all of our recommendations and suggestions with scientific research.

**Pentti J. Nupponen** is from Helsinki, Finland. His philosophy has always been, first and foremost, to consider what is the best for his patient's good health. He is immediate past president of the Holistic Dental Association, an international organization. He is the only biological dentist in central

PA certified by the board of the IABDM. Dr. Nupponen is a national/international lecturer, researcher, and writer. He has appeared on many radio shows and TV health segments. When answering questions from other health care professionals he repeats IAOMT's motto :

**"Show me the science!"**

As a further commitment to his patients and to the environment, Dr. Nupponen's office is one of the few GREEN DENTAL OFFICES out of 6000+ dental offices in Pennsylvania that have voluntarily collected and recycled mercury from his dental office waste lines for the past 2 decades.

**For more information,  
please call or email.**

The key to success is marketing, correct scheduling, and patient education. **We can teach you:**

*"Academic education will earn you a living. Self education will earn you a fortune." -- Jim Rohn*

*"This is a wonderful opportunity deserving of serious consideration."-Dr. C. E. L., DMD, MAGD*

**A very successful dental practitioner in central Pennsylvania is offering a position as an associate, leading to full ownership of the practice.** The current owner is willing to work with the prospective associate/buyer for 12 months introducing the associate to all the active patients, keeping the new patients coming, marketing the practice, and sharing practice management techniques that have proven very lucrative in spite of the economy.

Central Pennsylvania and Halifax particularly is a good place to live, with Pittsburgh, Philadelphia, Baltimore, Washington, DC, and New York City within easy driving distance. It is close to the New Jersey and Maryland beach towns and the Chesapeake Bay. The area features a great number of activities such as theater, movies, concerts, arts, sports, hiking, biking, boating, fishing, hunting, etc. It's a good place in which to raise a family and practice dentistry.

The building has 3 floors. The basic dental office is on the first floor, including reception area, 4 operatories, a lab and sterilization area. Administrative offices, a board room, doctors private office and photo studio are on the second floor. The third floor is partly used for record storage. It would not be difficult to expand the dental office to the second floor.

**It would also be very easy to convert the second and third floor into a 3BR, 2 full-BR luxury living quarters with its private entrance.**

This is a very high-tech office. It is fully computerized (SoftDent, digital radiography, imaging). We have networked computers in each operatory, with a RAID server, online backups, and shared internet. We have totally digital x-ray systems including panoramic as well as periapical systems. We use surgical, curing and cavity detecting lasers routinely. We have been utilizing manual face-bow Occlusal Analysis systems for years and recently we bought and started to use a computer guided T-Scan Occlusal calibration systems for better and more accurate finish for our reconstructive cases. Naturally we also have all the usual dental equipment and instruments found in all the other dental offices. In our dental laboratory we have new model grinders, and lathes. In the basement we have a new air compressor and a new vacuum system.

As you can see everything is well maintained and beautiful.

The current staff is a joy to work with. They work together very well.

We practice dentistry with the patients' overall health in mind. We are very conscious of the occupational hazards resulting from exposure to heavy metals, so we try to minimize it whenever we can. Subsequently we use safety equipment no other dental office uses in central PA. It is my responsibility to keep my patients, my staff and myself as healthy as I can.
